

# ONE QUIRCH [ MEAT TRAYS

Meat trays are essential for securely packaging and displaying fresh meats, poultry, and seafood, providing both functionality and visual appeal. Foam trays are lightweight, cost-effective, and excellent for cushioning products, while polypropylene (PP) trays offer durability and resistance to moisture, making them suitable for extended shelf life.

PET trays are clear and sturdy, enhancing product visibility while maintaining freshness. For eco-conscious options, fiber trays are a biodegradable alternative made from renewable materials to support sustainability goals. Each type of tray is designed to meet the diverse needs of food processors, retailers, and consumers, ensuring product safety and presentation.

RENEWABLE - RECYCLABLE - COMPOSTABLE
